payable to  
Periodontal Specialists  
for \$30 per person.*

Angelo DiMaggio, PT, Spine Therapist  
CEO of American Headache Institute

Mr. Angelo DiMaggio has been in practice for over 30 years. He has devoted the past 25 years exclusively to the treatment of spinal pain. Mr. DiMaggio is a nationally renowned lecturer; he presents a new system of spine care with a series of six spine seminars he has developed. Through major medical centers and universities, he has conducted over 500 seminars and instructed more than 10,000 medical practitioners and physicians. Seeking to address the needs of his patients suffering from headaches, migraines, TMJ, neck and oral-facial pain, he has devoted 4 of his 6 seminars to deal exclusively with the treatment of these conditions. Mr. DiMaggio's intense passion for helping those who suffer from severe, unresponsive head, neck, and facial pain is seen by his willingness to train others. He now turns his commitment to the creation of treatment centers which utilize his highly specialized, scientific-based treatment system.

*This seminar will present both scientific and clinical evidence supporting the cervical spines' prominent role in the production of TMJ and orofacial pain, clenching, grinding, bruxism, headache, migraine, and other perplexing symptoms of the face and head. Evidence-based cervical spine care can assist dental care aimed at relieving TMJ and orofacial pain.*

## After This Seminar You Will:

- Be up-to-date on cutting edge cervical spine research for the production of face and head symptoms.
- Have a clearer understanding of cervical neuroanatomy, pathology, and biomechanics as they relate to tooth and facial pain.
- Appreciate the safe and effective application of cervical biomechanics through posture correction and movement analysis with a live patient demonstration.
- Be able to conduct a 2 minute cervical history & examination which can help you reveal a dental patient's cervical involvement.
